# Piezoresistive MEMS Technology

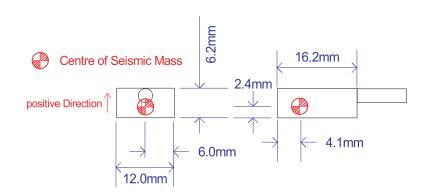

# **Description**

The model ASC 61C1 is an uniaxial accelerometer based on piezoresistive technology and factory calibrated. The ASC 61C1 is a small and compact accelerometer. Its housing is a flat design and hard anodised aluminium. Due to its low mass this model is ideal for testing light weight structures.

The sensing element has integrated overload stops and therefore the silicon chip is highly shock resistant. The ASC 61C1 has an excellent non-linearity over a wide frequency response. Electrically it is configured as a Wheatstone Bridge.

The ASC 61C1 can be obtained with all common sensor ID modules. A very high flexible and rugged cable provides a simple mounting. The ASC 61C1 is equipped as standard with 6 meter of this cable.
